Pete Karlson

We have had another growing year here at POK.

We have come out with another group of great new products for 2010.

We have redesigned many parts of our equipment to make it easier and safer to use. Our newly redesigned bumper lets you know what flow Pattern the bumper is in, even in a smoke filled room.

We have many new products this year. Our new **SERPENT** coupling is a great way to reduce nozzle reaction as well as giving you a better range of nozzle movement. The new **MAGIKADOR** nozzle has a floating stem to increase its reach by 15% and also increase the stream quality. The new **SLIDE-O-MATIC 600** is the only nozzle in the industry that can change it's flow pressure without shutting down.

Thank you for your continued support in the 2009 year and we are looking forward to a great 2010!

Sincerely,

Pete Karlson / National Sales Manager

This year we have redesigned our bumper guards and pistol grips. Both have been changed to a new, more resilient plastic. The bumper guards now have new markings to let the firefighter know what pattern the nozzle is in, even in a smoke filled room. There is a straight mark to represent straight stream and a V mark to represent the fog pattern.

The **LEGENDE** series nozzles have the newly updated bumper. This is a great new Automatic Gallonage nozzle.

The new **MAGIKADOR** nozzles have an improved floating stem that provides a better stream quality and also improved stream reach. The new **MAGIKADOR** selectable gallonage nozzles are available in flow ranges from 10 to 350 GPM in inlets of 1.0", 1.5", and 2.5" size.

The new **SLIDE-O-MATIC 600** has been redesigned to offer dual pressures of 50 and 100 PSI. The benefit of the new design is that we are the only nozzle manufacture that can change the flow pressures with out having to shut down.

We have invented another first in the industry. Our new **SERPENT** coupling allows for 40 degrees of movements. This new coupling can be installed in our 500 series nozzles or ordered as a 1.5" inlet/outlet to be added inline to any existing nozzles set-up.

We have designed a new 20" electric telescopic tube for our **LMP-80 monitors**. This unit is available with 3.0" NPT. This is a great complement to our 12" and 18" manual telescopic tubes.

The new electric master stream water / foam tube or with dispersing jaws provide an expansion ratio of greater than 10. Double flow selection of 800 and 1600 GPM with a pressure gauge and 4.0" inlet.

2010 Patented foam nozzles and tubes are smaller and lighter weight then the traditional foam tubes. They provide a reach of over 275 feet with a expansion of 10+. We have 13 different size and GPM versions available.

The POK **Mobile Foam Cart** has been redesigned with a heavier frame and tank that has a built in self bailing hose holder and also helps with the deployment of the hose when the need arises. The Mobile Foam Carts are now delivered with the new 2010 foam tubes.

POK now offers our new 5" waterway **BIPOK** and **TRIPOK**. These valves have built in carrying handles and pressure gauges. They are available in 5" or 6" storz inlet/outlets, and the **TRIPOK** has two 2.5" threaded outlets as well.

New electric hose reels are available in 8 different versions. They can be ordered in horizontal or vertical mounting options. You can also order them with or without hose guides in 120 foot or 240 foot hose lengths. These hose reels come with 1.0" hose or can be ordered without hose.

Now available from POK. New durable POM (Delrin) Stream, Full Fog Twist Shutoff nozzles. These new plastic nozzles are available in hose shank or threaded inlets in 6 different sizes.

POK new portable hose roller is a great way to roll up hose, up to 6" in diameter and up to 100 ft long. Easily dismantled for storage and made of aluminum with some red epoxy finish.

POK New Anti-return barrel strainer is great for drafting out of streams at a lower elevation. When you stop drafting the poppet will close and keep the water in the suction line. This allows for a faster draft, there is no need to refill the hose again.

These new items and all of our other great products can be found in the New 2010 catalog. You can download or request a new catalog at www.pokfire.com
